

## Shredded Arb Brash Specification Sheet

### General

Arb Shred typically refers to waste generated from arboriculture activities, including tree trunks, branches, roots and other woody materials.

---

### Acceptable Material

#### Shredded virgin brash

Where any part of the tree, including branches, trunk and roots are put through a shredder and the material is produced from clearance, forestry or arboricultural work and shredded to between 10-100mm

---

### Contamination in Loads

Loads must be clean and substantially free from contamination or run risk of additional charges or immediate rejection from site.

For example, but not limited to: Non-virgin wood (waste wood all grades), fossil fuels, plastic, sand, rock, soil, stone, mud or other mineral elements, metal, litter, non-virgin wood, diseased timber, burnt material, snow, ice and frozen structures.

*Sylvagen retains the right to review and modify this specification. Reasonable notice will be given prior to any change of specification. In the event of a rejection any and all costs associated with rejection and disposal of the material will be borne by the supplier.*
